

## Nationwide Local Dial-In, Toll-Free, and International Access

### On Demand is New and Improved!

#### Nationwide Local Dial-In

Reduce cost by dialing a local number. US toll-free and international toll-free are available for travelers.

#### Volume Controls

Improve your call quality by increasing or decreasing the volume on a line or in the entire call.

#### Call Security

Increase call security by asking for a security code, hearing who is on line, locking the call or disconnecting everyone when the call is finished.

#### Manage Billing Codes

Add billing codes to the invoice or portal reports. Moderators can enter a billing code after the conference ID or add or change billing codes in Connect To Copper™.

#### Flexible Dial-In Options

On Demand audio conference calls can have up to 300 participants without a reservation. Participants can easily dial into an On Demand conference call worldwide. Use Copper Conferencing's nationwide network of local numbers to access a conference call and automatically reduce your conferencing cost. Find your local dial-in number on the Copper Conferencing website.

Traveling participants can either use a local dial-in or toll-free number. International participants access calls with toll-free numbers in most countries or can dial-in on any of the domestic numbers.
